Sahong Kim

18. February 2010

Create Solutions using “Analogy” in TRIZ

“Analogy” is the process of comparing one thing with another that has similar features.

Use “Analogy” to create solutions in one technical system by investigating other technical systems with similar features.

“Analogy” supports to generate “proven” solutions fast.

“Analogy” is used in TRIZ tools such as

Function Oriented Search,

Physical Contradiction,

Trends of Engineering System Evolution

and Harmful Machine Theory.

1. Create Solutions using Analogy in TRIZ
2. FOS (Function Oriented Search)
 - Example : “Cosmetic Liquid”
3. Physical Contradiction
 - Example : “Wall Socket” & “Clothes Hanger”
4. TESE (Trends of Engineering System Evolution)
 - Example : “Business Card”.
5. Harmful Machine Theory
 - Example : “Umbrella”, & “Pen with Record”
6. FOS + TESE
 - Example : “Automated Labeling of Bottles”
7. Conclusions

Function Oriented Search

Utilize global knowledge to achieve more effective innovation faster

There are proven technologies somewhere in the world that can address your key problems

The “Leading Area” is an industry or scientific field in which similar functions have high importance

Generalize Functions to search in the “Leading Area”.

If solution from “Leading Area” is expensive, go to another Areas.

Function Oriented Search

How Many Ways Can You Measure Temperature?

SOLID BODY

- Bimetallic plate
- Spiral
- thermocouple
- semiconductor thermometer of the resistance

• • • etc

LIQUID

• • • etc

http://www.fos.ru/fisika/12338_1.html

GAS

• • • etc

FIELD

- Termoelektricheskie thermometers.
- The Device thermo-electrical thermometer
- Standard and non-standard thermometers
- The Electric thermometers of the resistance
- The Types and designs TS
- The Bridge schemes of the measurement of the resistance thermometer
- The Balanced bridge
- The Unbalanced bridge
- The Automatic balanced bridges
- The Measurement thermo-E⁻ way
- The Automatic potentiometer
- The Noncontact measurement
- The Main notions and laws of
- The Pyrometers of the partial
- The Optical pyrometers
- The Photoelectric pyrometers
- The Pyrometers spectral relation
- The Pyrometers of the total radiation

◆ FOS Steps

Step 1: Define Main Function

Step 2: Define Root Function

Step 3: Search for Examples and Ideas

Step 4: Create Solutions

Function Oriented Search Example: “Cosmetic Liquid”

Korea TRIZ Conference

What is problems?

What is Disadvantages?

Step 1: Define Main Function

What is Main Function?

“Apply Cosmetic Liquid to Face”

Step 2: Define Root Function

- “Root function” is Abstract or Generalized Function of Main Function.
- “Root Function” must be expressed as “verb” + “noun”
- Function must explain “what to do or what to change?”
- There is a database to support defining Root Function.

Function Oriented Search Example: “Cosmetic Device”

RESOURCE ACTION	SUBSTANCE	FIELD	INFORMATION
Transport (move)	1.1. Move substance Typical examples	2.1. Move field Typical examples	3.1. Move information Typical examples
Move or add	1.2. Add substance Typical examples	2.2. Add field Typical examples	3.2. Add information Typical examples
Extract Delete	1.3. Delete substance Typical examples	2.3. Delete field Typical examples	3.3. Delete information Typical examples
Hold (fix)	1.4. Hold substance Typical examples	2.4. Hold field Typical examples	3.4. Hold information Typical examples
Reflect (change direction)	1.5. Reflect substance Typical examples	2.5. Reflect field Typical examples	3.5. Reflect information Typical examples
Transform* (change of matter) * warm/cool, hold up/accelerate	1.6. Transform substance Typical examples	2.6. Transform field Typical examples	3.6. Transform information Typical examples

What is Root Function?

“Add Substance”

< Database of Root Function >

- Every Cell shows Typical Examples of “Root Function”.

Function Oriented Search Example: “Cosmetic Device”

Step 3: Search for Examples and Ideas

Function Oriented Search Example: “Cosmetic Device”

Step 4: Create Solutions

Solution

Function Oriented Search Example: “Cosmetic Device”

- Other Application with the same principle

You can buy this device in
Aero or Artware (USA).

<http://www.eco-artware.com/catalog/JR1-perfume.php>

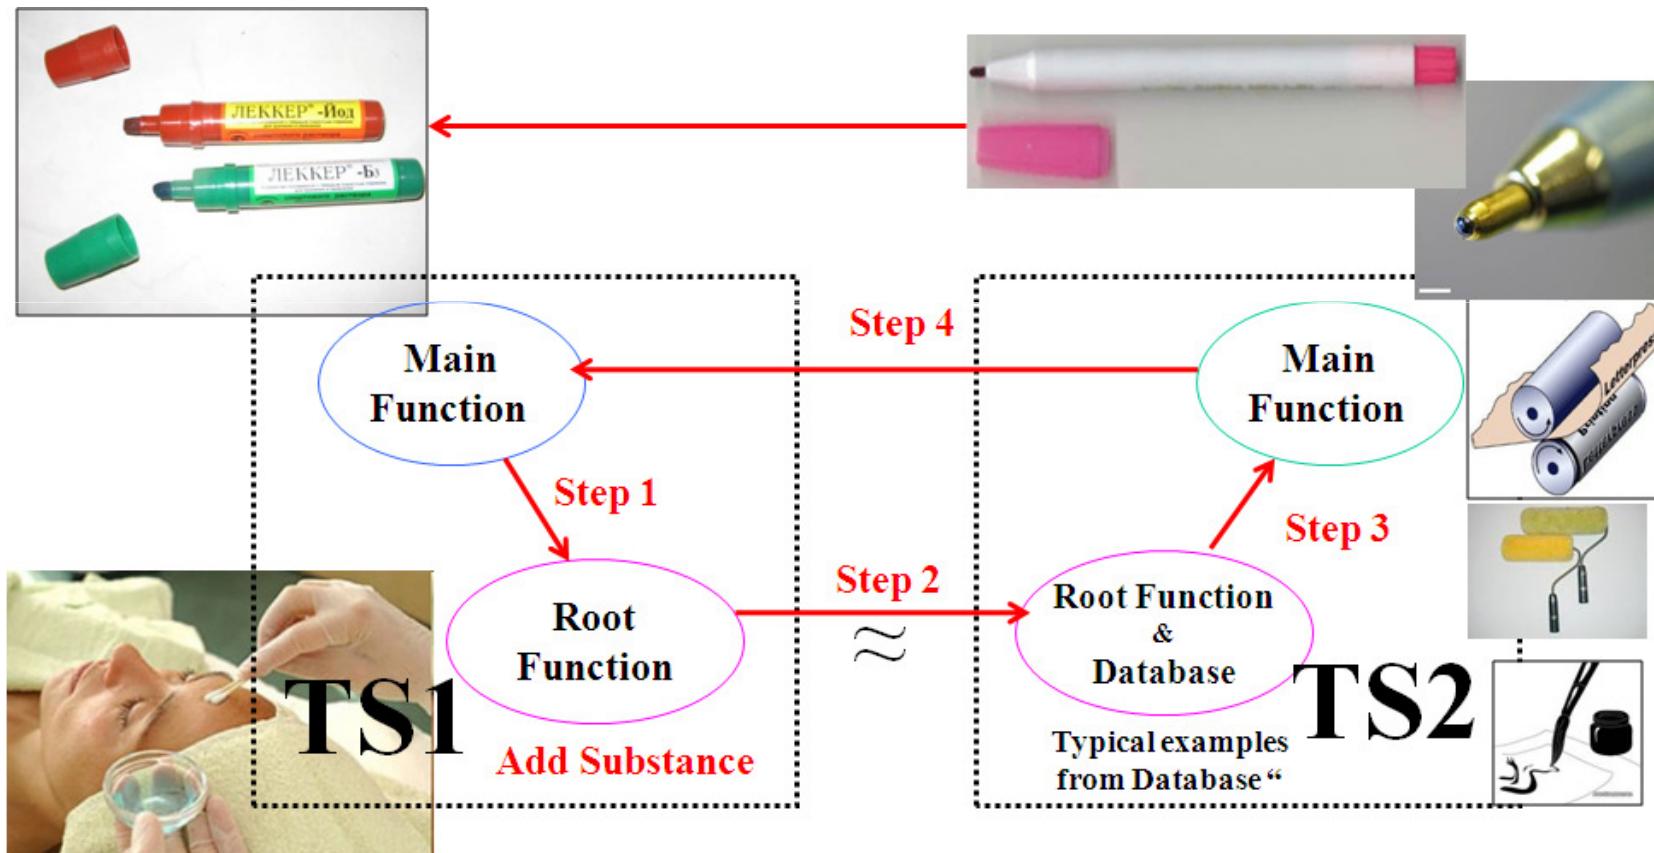

Function Oriented Search Example: "Cosmetic Device"

- Other Application Idea with the same principle

Function Oriented Search Example: "Cosmetic Device"

- Summary

*TS: Technical System

1. Create Solutions using Analogy in TRIZ
2. FOS (Function Oriented Search)
 - Example : “Cosmetic Liquid”
3. Physical Contradiction
 - Example : “Wall Socket” & “Clothes Hanger”
4. TESE (Trends of Engineering System Evolution)
 - Example : “Business Card”.
5. Harmful Machine Theory
 - Example : “Umbrella”, & “Pen with Record”
6. FOS + TESE
 - Example : “Automated Labeling of Bottles”
7. Conclusions

Physical contradiction is a model of inventive problem where **opposite requirements** are imposed on the same component of Technical System.

Example

- Cell Phone buttons should be **small** to provide for small phone body, but the buttons should be **large** to provide for convenient dialing.
- Computer password should be **long** to make its cracking more difficult, but it should be **short** to be easy to memorize.

Physical Contradiction

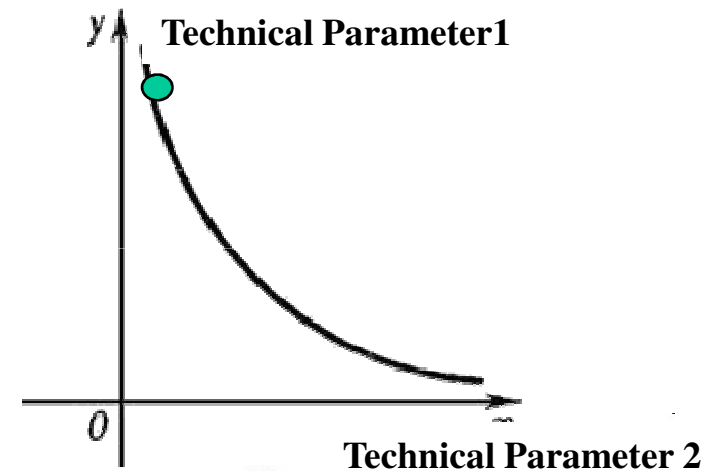

Physical Contradiction

“keypad of the telephone”

Opposite Requirements
to One Parameter

Technical Contradiction

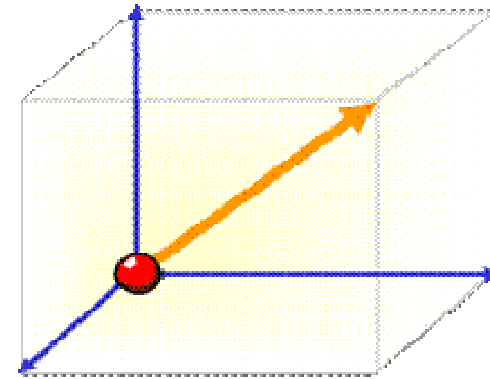

Physical Contradiction

- Separation: Typical Solutions for Physical Contradiction

Time

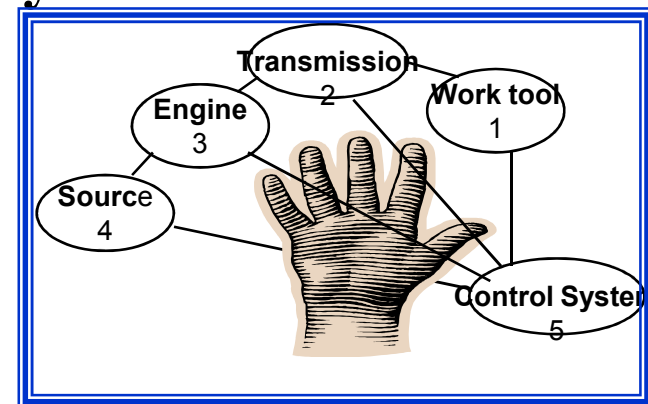

Space

Substance & Field (Materials)

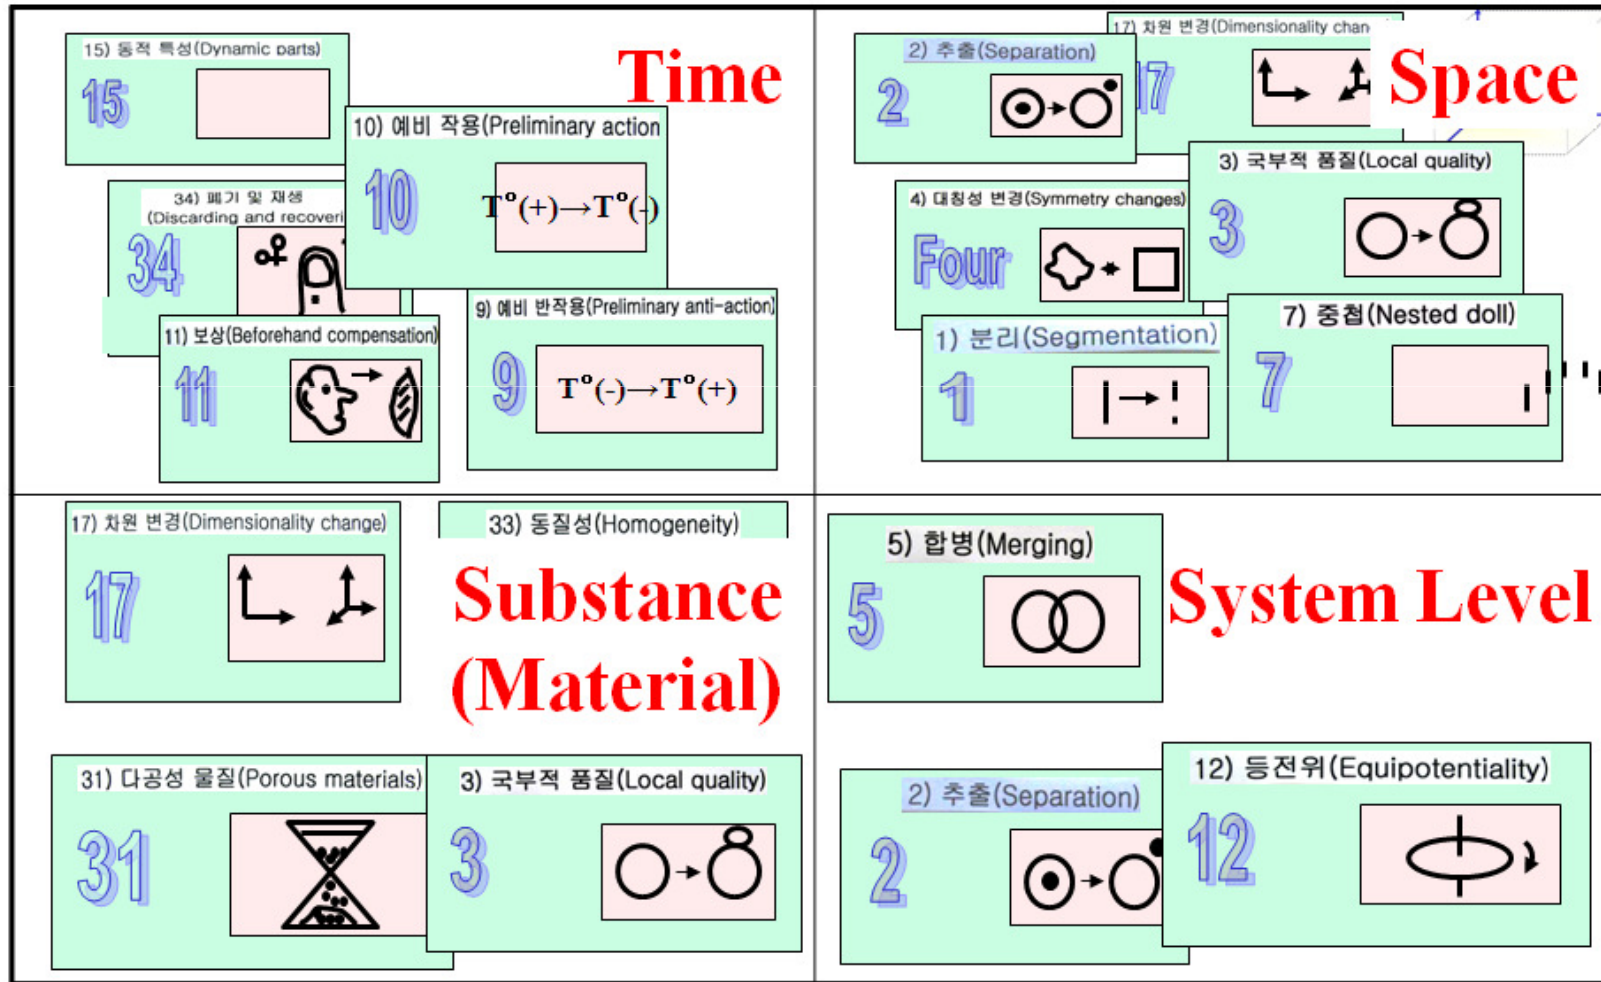

System Level

Physical Contradiction

- Separation with 40 principles

Physical Contradiction Example: “Wall Socket”

Korea TRIZ Conference

“Physical Contradiction?”

Wall sockets should be **large** to insert many plugs, but wall sockets should be **small** to fit into small space

Physical Contradiction Example: “Wall Socket”

Solution in Time and Space: “Pop-Out Socket”

Principles Used for Solution

5) 합병 (Merging)

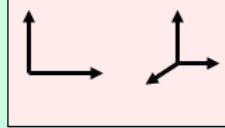

5

5. Принцип объединения

17) 차원 변경 (Dimensionality change)

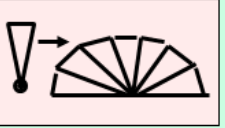

17

17. Переход в другое измерение

15) 동적 특성 (Dynamic parts)

15

15. Динамические свойства

Before

After

“Push to Pop Out”

- A Pop-Out Socket with five power splitters.
- Flat like a normal wall socket until you push to insert more plugs into the socket.

Physical Contradiction Example: "Wall Socket"

Solution in System Level and Substance

Principles Used for Solution

5) 합병 (Merging)

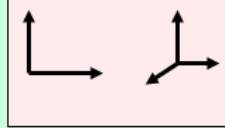

5

5. Принцип объединения

17) 차원 변경 (Dimensionality change)

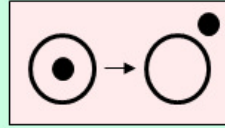

17

17. Переход в другое измерение

2) 추출 (Separation)

2

2. Принцип разделения

Solution

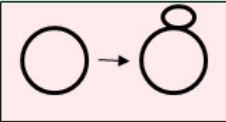

Physical Contradiction Example: “Wall Socket”

Solution in System Level and Space

Principles Used for Solution

3) 국부적 품질 (Local quality)

3

5) 합병 (Merging)

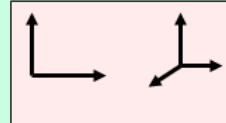

5

5. Принцип объединения

17) 차원 변경 (Dimensionality change)

17

17. Переход в другое измерение

Solution

Physical Contradiction Example: “Clothes Hanger”

Korea TRIZ Conference

“Physical Contradiction?”

- Clothes Hanger should be **large** to hang many clothes, but clothes hanger should be **small** to fit into small space

Physical Contradiction Example: “Clothes Hanger”

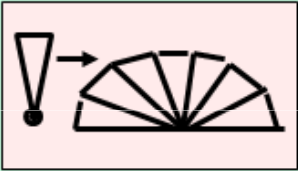

Korea TRIZ Conference

Solution in Time and Space

Principles Used for Solution

15) 동적 특성(Dynamic parts)

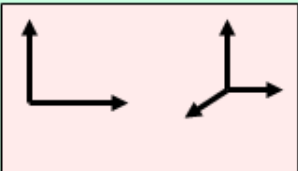

15

A diagram showing a fan-like structure with a central pivot point and multiple segments radiating outwards. An exclamation mark is placed to the left of the pivot, indicating a point of interest or a dynamic part.

17) 차원 변경(Dimensionality change)

17

17. Переход в другое измерение

A diagram showing a 2D coordinate system with two axes (one vertical, one horizontal) and a 3D coordinate system with three axes (one vertical, one horizontal, one diagonal), illustrating the transition from 2D to 3D.

Solution

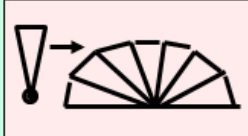

Physical Contradiction Example: “Clothes Hanger”

Solution in Time and Space

Principles Used for Solution

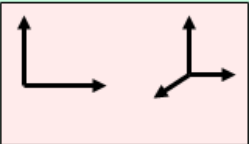

15) 동적 특성 (Dynamic parts)

15

17) 차원 변경 (Dimensionality change)

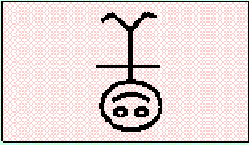

17

17. Переход в другое измерение

13) 거꾸로 함 (The other way around)

Solution

Similar PC and
Similar Solution

1. Create Solutions using Analogy in TRIZ
2. FOS (Function Oriented Search)
 - Example : “Cosmetic Liquid”
3. Physical Contradiction
 - Example : “Wall Socket” & “Clothes Hanger”
4. TESE (Trends of Engineering System Evolution)
 - Example : “Business Card”.
5. Harmful Machine Theory
 - Example : “Umbrella”, & “Pen with Record”
6. FOS + TESE
 - Example : “Automated Labeling of Bottles”
7. Conclusions

What is TESE (Trend of Engineering System Evolution)?

- The Trends of Engineering System Evolution are statistically reliable lines of evolution that describe natural transitions of systems from one state to another
- These lines of evolution are true and correct for all engineering systems or large groups of engineering systems
- TESE is a navigation system for development of technical systems

What is TESE (Trend of Engineering System Evolution)?

Korea TRIZ Conference

- S** 1. **S curve** (non linear development of TS as based model)
- 2. **Conductivity level - increase**
- D** 3. **Dynamicity level - increase**
- ↑** 4. **Transition to the Supersystem**
- i** 5. **Ideality level - increase**
- c** 6. **Completeness level - increase**
- v** 7. **Substance-Field level MATCHEM**
- m** 8. **Macro– Micro (transfer)**
- H** 9. **Harmonization and non harmonization**

What is Line of development or “scenarios”?

- Every Trends of TESE have some “sub-trend” as mechanism and recommendations called “Line of development” or “scenarios”
- There are 22 different “scenarios” from TESE

Line of development or “scenarios”

- **TESE(Trend of Engineering System Evolution)**
Dynamicity level – increase; As an Engineering System evolves, it and its components become more “dynamic.”

How can we use “scenarios” for analogy?

- If technical systems(TS) follow similar scenario, they use similar solution
- If the scenario of TS1 and TS2 is similar, we can use technology from TS1 for TS2

Examples of “scenarios” from “increase of dynamicity”

Function of “Hold of Lamp”

“Flare”

Invention of "business card" with TESE

Korea TRIZ Conference

Divorce Attorney

VISITING CARD - BALLOON
A balloon was used as a medium for a visiting card, for Dr. Pramod Nigrahdas, a chest physician. In order to read the details of the card, one would have to blow the balloon - an exercise that would determine his/her lung capacity.

2krota.ru

Working idea for this seminar

Korea TRIZ Conference

**We can create
business card with
TWO languages or TWO pictures**

**Picture 1- your name and company
Picture 2- your photo**

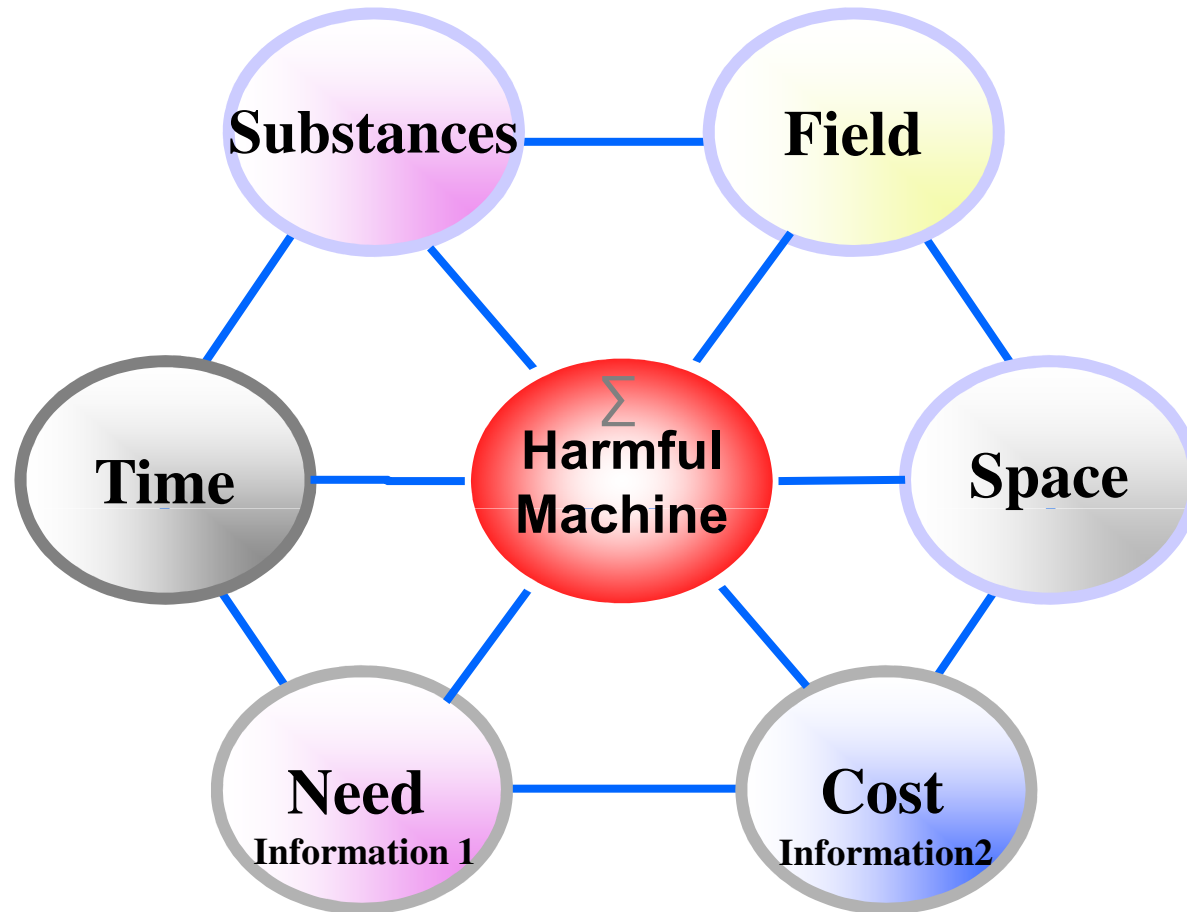

1. Create Solutions using Analogy in TRIZ
2. FOS (Function Oriented Search)
 - Example : “Cosmetic Liquid”
3. Physical Contradiction
 - Example : “Wall Socket” & “Clothes Hanger”
4. TESE (Trends of Engineering System Evolution)
 - Example : “Business Card”.
5. Harmful Machine Theory
 - Example : “Umbrella”, & “Pen with Record”
6. FOS + TESE
 - Example : “Automated Labeling of Bottles”
7. Conclusions

What is Harmful Machine?

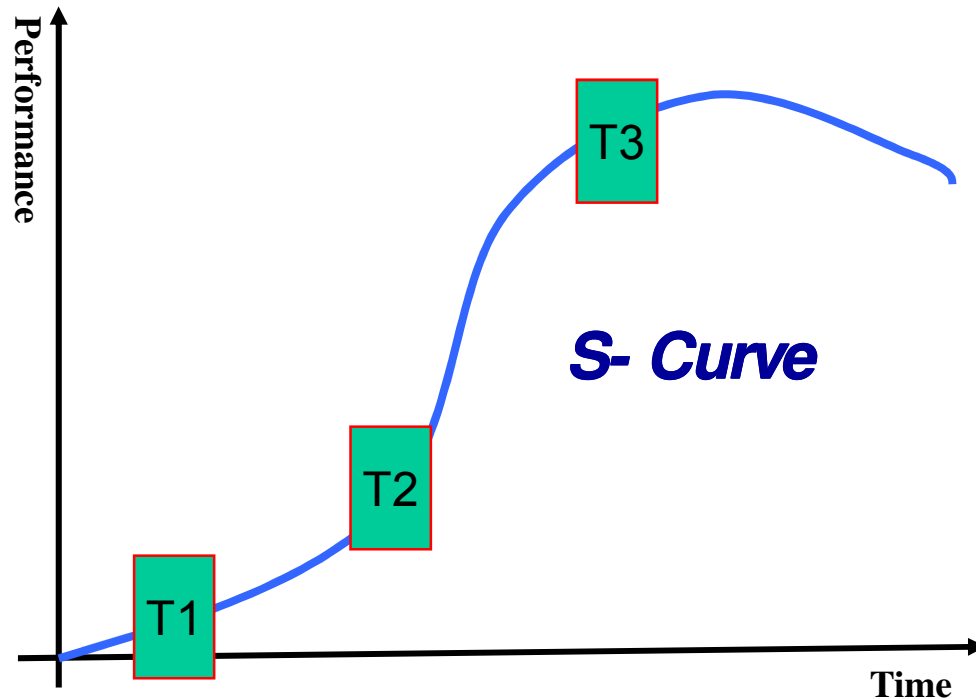

- Harmful Machine means the “Disadvantages of system”
- People develop "machines" in a direction of elimination of disadvantages and using at the moment algorithm of a choice of the cheapest Resources for achievement of these purposes

Resources in development (6 Categories)

Harmful Machine corresponds with all resource
Disadvantages are from every categories of resource

Type of Disadvantages vs. S-curve Evolution

- Type of disadvantages (Harmful Machine) vary with evolution stage on S-curve
- Disadvantage is classified as 6 types with each resources

Classification of disadvantages (harmful machines)

6 Categories of Resource

Young TS

6 Types of disadvantages (S-Curve)

T1

T2

T3

Old TS

Substance	Field	Space (shape)	Time (velocity)	Information (need)	Information (cost)
Harmful substances	Harmful fields (small noise-stability)	The big dimensions at carrying	The small longevity (time of a life)	There is no corrective function	The big cost of preparation of manufacture
Presence of account materials	The big weight	The big dimensions at keeping	The big time at recharge	Low reparability	The small cost – bad
The small productivity	The big total power consumption	The eccentric shape	The small time of autonomous work	The mobility is absent	The big price – bad
Low power saturation of substance	The big power consumption at inclusion	Banal shape and color	Ergonomics (the little time before appearance of tiredness)	Few additional functions	The big cost of repair
Necessity take away substance	The big power consumption at switching	The shape is not coordinated with super system	Low velocity (the big time of implementation)	Many additional functions (uncertainty)	The big cost of consumable materials
Necessity supply with power-supplier, management	Many movable parts	Small “range”	The big time mastering by skill (complexity)	Demands presence of additional systems	High cost of recycling

36 types of harmful machine are classified

- If technical systems(TS) have similar disadvantages, similar solution can be applied
- If the disadvantage of TS1 and TS2 is similar, we can use technology from TS1 for TS2

Analogy for Solution 1

Examples to solve each types of disadvantage are in Database.

Substance	Field	Space (shape)	Time (velocity)	Information (need)	Information (cost)
Harmful substances	Harmful fields (small noise-stability)	The big dimensions at carrying	The small longevity (time of a life)	There is no corrective function	The big cost of preparation of manufacture

Presence of consumable materials Наличие расходных материалов	The big weight Большой вес	The big dimensions at keeping Большие габариты при хранении	The big time at recharge Большое время перезарядки	Low reparability Низкая ремонтопригодность	The small cost – bad Маленькая цена - плохо
The small efficiency Маленькая Производительность	The big total power consumption Большое суммарное Энергопотребление	The eccentric shape Экстравагантная форма	The small time of autonomous work Маленькое время автономной работы	The mobility is absent Отсутствует мобильность	The big price – bad Большая цена - плохо
Low power saturation of substance Низкая энергонасыщенность вещества	The big power consumption at inclusion Большое энергопотребление при включении	Banal shape and colour Безызыщная форма и цвет	Ergonomics (the little time before appearance of tiredness) Эргономичность (маленькое время до возникновения усталости)	Few additional functions Мало дополнительных функций	The big cost of repair Большая стоимость ремонта
Necessity take away substance Необходимость убрать вещество	The big power consumption at switching Большое энергопотребление при переключении	The shape is not coordinated with super system Форма не согласована с СС	Low velocity (the big time of implementation) Низкая скорость (большое время исполнения)	Many additional functions (uncertainty) Много дополнительных функций (ненадежность)	The big cost of consumable materials Большая стоимость расходных материалов
Necessity supply power-supplier, management Необходимость снабжения энергисточником, управлением	Many movable parts Много движущихся частей	Small "range" «дальность»	The big time mastering by skill (complexity) Большое время овладения умением (сложность)	Demands presence of additional systems Требуется наличие дополнительных систем	High cost of recycling Высокая стоимость утилизации

- Step 1: Go to classification table of “36 types of disadvantages”, and select **2.5** “The big power consumption at switching”

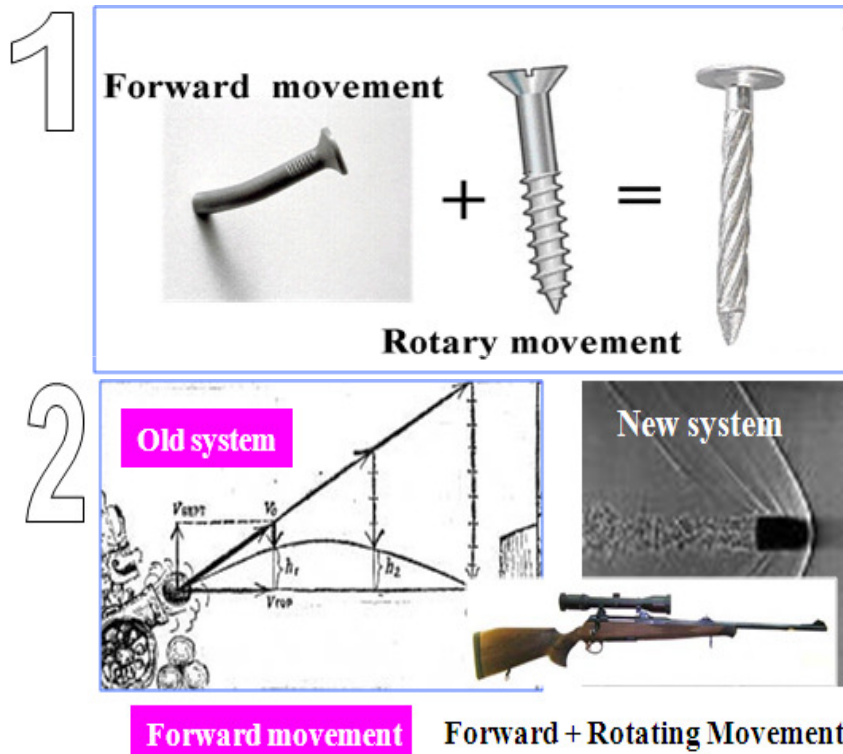

- Step 2: See recommendation of TESE Laws

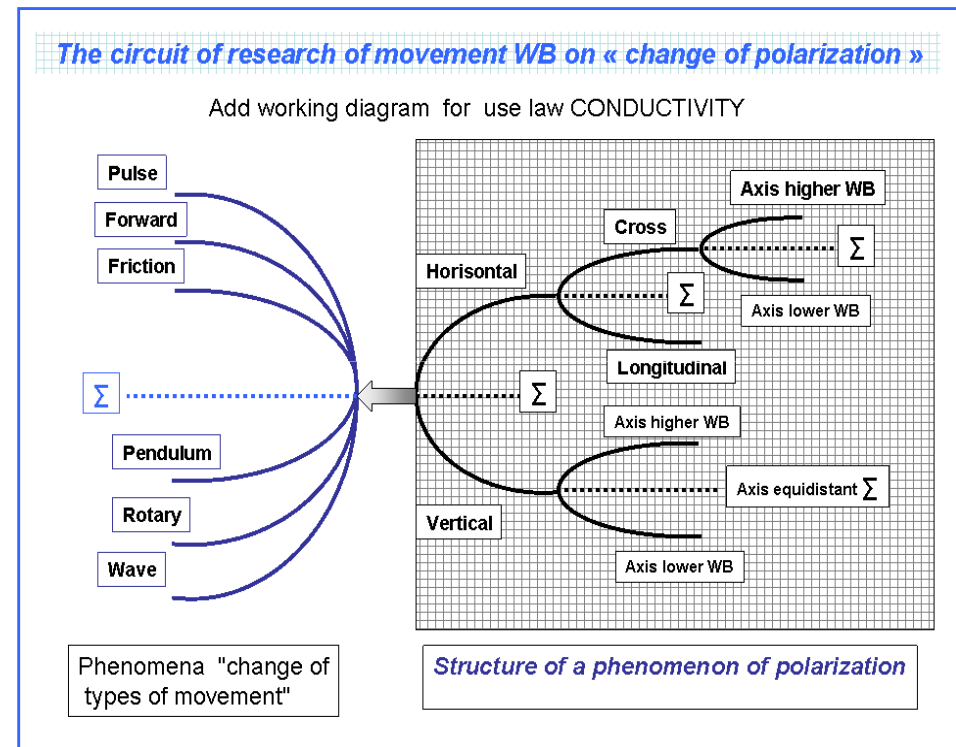

- Step 3: Go to electronic database to look for useful examples

FOS+TESE Example: "Automated Labeling of Bottles"

Recommendation from FOS

Recommendation from Conductivity

• **Conclusion:** "Necessary to combine Forward and Rotating movement"

FOS+TESE Example: “Automated Labeling of Bottles”

Korea TRIZ Conference

Old System

- **Stop and Rotate to Label**

New System

- **Move and Rotate to Label**
- **Add Two Labels**

1. Four Efficiency Method of “Analogy” in TRIZ:
 - A) similar FUNCTION, similar solution (FOS)
 - B) similar PC, similar solution (Physical Contradiction)
 - C) similar disadvantage, similar solution (HM theory)
 - D) similar scenario, similar solution (TESE)
2. FOS, PC and HM are closely related to TESE
3. Can use “Analogy” in “Analysis Stage” and “Solution Generation Stage”.

Conclusions

FOS + TESE is very popular tool in search of good analogy.

Figure 9: Frequency of TRIZ's main components: most often used
